

"The Turks and Caicos Islands are surrounded by one of the most extensive coral reef systems world-wide (65 miles across and 200 miles long).

A 22 mile-wide channel, the Columbus Passage, separates the Turks Islands from the Caicos Islands. This 8,000 foot deep passage serves as major transit lines for migrating Humpback Whales, Spotted Eagle Rays, Manta Rays, Turtles and Dolphins."

Nov 25 - Dec 2, 2006
